

Regular Cleaning & Maintenance FOR WOVEN VINYL

Common Tools for Cleaning & Maintenance

O1. Dry-wet vacuum cleaner O2. Roller brush machine
O3. Rags O4. Mop O5. Brush O6. Neutral detergent
O7. Bucket

Common Neutral Detergents

O1. Washing agent O2. Washing powder
O3. Glass cleaner

O1. Collect dust

O2. Splash detergent foam
in warm water

O3. Scrub and collect dust
with roller brush machine

O4. Collect waste water with
dry-wet vacuum cleaner

O5. Clean local stains
with brush

O6. Wipe with mop
and warm water

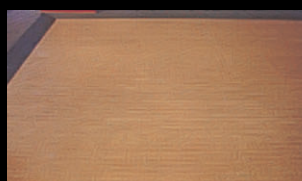

O7. Splash warm water for
second cleaning

O8. Collect waste water with
dry-wet vacuum cleaner

O9. Wipe with special mop

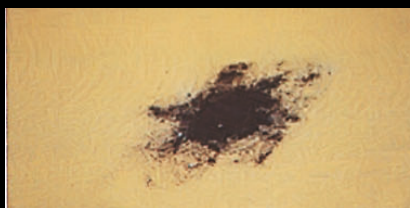

O10. Clean as new

Regular Cleaning & Maintenance FOR WOVEN VINYL

Common Tools for Cleaning & Maintenance

O1. Domestic vacuum cleaner O2. Washing powder
O3. Rags O4. Mop O5. Brush O6. Neutral detergent

O1. Stains requiring cleaning

O2. Collect dust

O3. Spray detergent on stains

O4. Scrub with nylon brush

O5. Wipe with rags or mop

O6. Wipe with warm water

Regular Cleaning & Maintenance FOR WOVEN VINYL

General

The color and pattern choice affects the maintenance requirements, which is the same for entrance and stairs; all furniture should have no sharp corners and be protected with Teflon or PTFE.

Chairs with wheels in an office must be of hard materials so that they can move easily, avoiding unnecessary damage or tear of the woven flooring.

For wet cleaning, it is suggested that only clean warm water should be used and that a detergent should be used only in specific areas. Never use strong-acid detergents, cleaning powders or strong solvents because these may cause damage to the woven flooring. In short, apply the minimum dosage. When it is necessary to use a detergent, please use a PH7-PH8 neutral detergent.

Cleaning after Engineering

Start installation of woven flooring after all other types of work are completed, if possible. If not, use plastic cloth or sheet to cover the woven flooring. Use a dry detergent and avoid using a mop; a vacuum cleaner is recommended for removing any scattered garbage and dust. Last, use a combing dryer for cleaning.

Routine Cleaning

Dry cleaning should be adapted in all maintenance operations, if possible, so that the cleaning cost can be cut down and the service life of woven flooring prolonged. For routine maintenance, a vacuum cleaner should first be used (a vacuum cleaner with a rotary roller brush is recommended); if necessary, a mop can be used for cleaning. The mop should be frequently washed and wrung up, and mop water should be changed before it becomes dirty. If a detergent is used, the most important thing is to clean twice with clean water.

Regular Cleaning

Use a vacuum cleaner to collect dust on the woven flooring; then, use a combing dryer with a vertical rotary roller brush for cleaning. The brush must be soft, and the pressure applied by the brush on the woven flooring must be a minimum value. Operate the machine along the longitudinal direction of the woven flooring, and use clean warm water. If a detergent is used, the most important thing is to clean twice with clean water. If the machine can be used directly, it is unnecessary to use a detergent.
